Issue reported while implementing end-to-end AWS Feed

**Source Name:** SHERIDAN DIRECT

Source ID: 840

RCA:

When metadata is downloaded using AWS Lambda, the long names returned by the Rets library for the SHERIDAN DIRECT source are incomplete. When we compare the long names with the manually downloaded file for SHERIDAN DIRECT, we found that the long names provided by the Rets library, which we are using in AWS Lambda, do not match the long names in the manually downloaded file, even though they are supposed to be the same.

To ensure that this issue is not present in every source, we downloaded metadata for GORA2 DIRECT using AWS Lambda and manually downloaded its file to check the long names. Both sets of long names were the same.

Additionally, we checked some other random old and latest Rets sources and found that this issue occurred in some sources but not all.

Below are Some Screenshoots of the issue explained above:

	A	B	C	D	E	F	G	H	I	J

Finding:

This is not a common issue it's occurring in some sources.
